

ARLINGTON BASS CLUB NEWSLETTER July 2010

President's Message

TOURNAMENT DIRECTORS

If you need a partner for the upcoming tournament please call one of the tournament directors listed below, they will try to help you.

Clay Garrett
817-851-9309

Scott Dubee
817-938-3444

Brett Buie
972-207-4157

Doyle Weaver
817-467-6020

CALENDAR OF EVENTS

July 6, 2010
ABC MEETING
7:00 pm
Coker's BBQ

July 10-11
ABC Tournament
Hubbard Creek
Sat. 5:00 – 2:00.
Sun. 5:00 – 2:00

COOKOUT CONTACT

Charlie Ford
Gary Vick
Barbara Potts

Greetings ABC members and families. Well summer is here. Make sure you have plenty of water with you while fishing in the heat. Try to drink as much water as possible the day before to help you stay hydrated.

Fish care Guidelines for Summer

Here's the information that was provided to us by Fun-N-Sun at the pre tournament meeting for the recent Squaw Creek Tournament. This proactive plan to keep your catch healthy was created by the folks at Sure Life and has been used in several summer time tournaments with great results. Keep in mind the water temp at Squaw Creek was over 90 degrees for most of the lake and I don't know of a single fish that was not released alive.

In an effort to provide the best possible live release during tournaments; we are encouraging you to be proactive in addressing livewell conditions ALL DAY LONG. Although the weigh in procedure is critical, your handling of the fish throughout the day is even more critical, since the fish are in YOUR POSSESSION for the majority of the time. Please study the following suggestions and give them your utmost consideration.

1. In order to properly condition a livewell, you need to know the approximate volume of your livewell. We highly recommend that you measure the dimensions of your livewell(s) ahead of time to determine gallon volume. Use the following formula to determine the water capacity of your square or rectangular livewell. Using a measuring device (tape or ruler), multiply length times width times height of water in livewell (all in feet) times the constant 7.5. The result will be in gallons.
2. Fill livewell(s) early (shortly after takeoff) from good water in main body of lake. Do not fill livewell(s) or exchange water in creeks or coves and especially NOT at take off site.

HELPFUL TIP: If you have separate livewells, fill first livewell early and store bags of ice in second livewell. This will help keep the primary livewell cool. Afterwards, if you need the second livewell, it will be easier to cool down. This method will also conserve your ice.

3. IMPORTANT!!!! Treat livewell with CATCH & RELEASE early and recirculate for a couple of minutes to thoroughly mix. For tournaments use the following chart to determine proper amount of CATCH & RELEASE to add to your livewell. MAKE SURE YOU DOSE LIVEWELL BEFORE YOU START FISHING!!!!

GALLONS OF WATER CAPFUL(S) OF CATCH & RELEASE FROM 10 OZ. BOTTLE

10-15 Gallons 2 ½ Capfuls Of CATCH & RELEASE

20 Gallons 3 –3 ½ Capfuls Of CATCH & RELEASE

25-30 Gallons 5 Capfuls Of CATCH & RELEASE

50 Gallons 7 Capfuls Of CATCH & RELEASE

4. CRITICAL!!!!LIVEWELL TEMPERATURES. Please keep your livewell(s) as close as possible to 65 degrees Fahrenheit. DO NOT LET LIVEWELL TEMPERATURES EXCEED 75 degrees Fahrenheit at any time. Check your thermometer OFTEN to make sure temperatures are in target range.

5. Add 3% hydrogen peroxide to livewell once you catch your FIRST FISH. The 3% hydrogen peroxide will provide adequate dissolved oxygen levels even if you experience livewell failure. Pay attention to the dosage rates below and do not exceed our recommendations. Repeat this procedure when you start to operate second livewell upon introduction of fish.

GALLONS OF WATER 3% HYDROGEN PEROXIDE DOSAGE RATE

10-15 Gallons ½ Cupful (4 Fluid Ounces)

20 Gallons ¾ Cupful (6 Fluid Ounces)

25-30 Gallons 1 Cupful (8 Fluid Ounces)

50 Gallons 2 Cupfuls (16 Fluid Ounces)

6. If you catch a heavy load of fish, please exchange water in livewell at least once during the day and repeat cooling of water, dosing of CATCH & RELEASE and reapply hydrogen peroxide to livewell.

7. IMPORTANT!!!!!!!!DO NOT. REPEAT. DO NOT PUMP IN FRESH WATER OR RECIRCULATE FRESH WATER THROUGHOUT THE DAY. This will defeat the purpose of cooling the water down and applications of water conditioners. DO NOT OPERATE LIVEWELLS ON TIMED AERATION. KEEP LIVEWELLS ON MANUAL RECIRCULATION CONSTANTLY.

8. DO NOT FILL WEIGH IN BAGS FROM WATER OVER THE SIDE OF BOAT AT WEIGH IN SITE!!!! Fill bags with water from treated and cooled livewells. Dip bags in livewells to fill with water or pump water from livewell through pump out pumps directly to bags as they hang off side of boat. To fill bags with water from lake at this point will totally defeat the purpose of all the work you have done in that livewell throughout the day.

9. TIPS FOR DEEP HOOKED OR WOUNDED (BLEEDING) BASS: Wet hands and try to remove hook using “through the gill method” working quickly. Do not keep bass out of water for more than 40 seconds. If having difficulty, then place bass in livewell water between procedures and allow

it to breathe for a few moments and resume task of hook removal. If bass has swallowed the hook, then cut the line close as possible to hook eye and place bass in livewell. If bass is bleeding from body or gills, apply a pinch of CATCH & RELEASE directly to the wound. While we can't guarantee that your bass will live, following these procedures will give them the best possible chance for survival.

10. TIPS FOR PROPERLY HANDLING FISH: Try to keep handling bass to a MINIMUM! Try not to let bass come in contact with carpet or let bass bounce around on carpet. This will cause extreme injury to the all-important slime coat or skin of the bass. If you do disrupt slime coating from this action, then this is a good time to rub some CATCH & RELEASE on abrasion. Be cautious not to break jaws of bass. Once broken, that bass will not be able to feed again. ALWAYS hold bass in vertical position or use TWO HANDS to support body. Holding bass with single hand by way of mouth in a horizontal position without proper support will dislocate or break jaw.

June Tournament

We had a great time at Eagle Mountain. It was hot and windy. Here are the results:

Division I

First Place Curtis Miley & Royce Bush	13.50
Second Place Tray Hutchins & Chris Junkin	12.95
Third Place Dan and Scott Dale	9.55
Big Bass Chris Junkin	7.95

July Tournament

We are headed to Hubbard Creek. July 10-11. Weigh in will be held at Village Inn. Hours will be 5 am to 2 pm. This is an optional day format tournament.

Next Meeting

July 6' 7 pm at Cokers BBQ. Bill Wilcox will be our guest speaker. Bill is a member of the club as well as the host of Honey Hole All Outdoors TV show. Hope to see ya all there.

Top Six after April

Brandon Adamcik	65.62
Dale Washington	53.55
Charlie Ford	47.27
Scott Dubee	37.23
Dan Dale	36.20
Bubba Sanders	34.48

\$1 A Day

Is All It Takes To Keep Your Arlington Bass Club Family Safe All Year!

The flu, common cold, and allergies gives your family enough to deal with on a daily basis!

Ideal Pest and Lawn will keep pests out of your house, thus helping prevent diseases or allergens they may carry!

For every Annual Contract from an Arlington Bass Club Member, Ideal Pest and Lawn will donate \$15 or 2% of commercial business. to the year end prize tournament.

Call Dale Washington or Scott Dubee at 817.447.0438 for more details
